Abstract

There is provided a polypropylene resin composition comprising the following components (A) and (B):

- 5 (A) 10 to 99% by weight of a propylene homopolymer produced by polymerization with a metallocene catalyst, which homopolymer satisfies the following requirements (a1) and (a2):
- 10 (a2) its intrinsic viscosity [η] is 0.5 to 6 dl/g, and (B) 90 to 1% by weight of an amorphous α -olefin polymer
 - containing not less than 20% by mol of an α -olefin unit having 3 to 20 carbon atoms, which α -olefin polymer satisfies the following requirements (b1) to (b3):
- 15 (b1) its melting peak does not exist substantially according to a differential scanning calorimetry (DSC),
 - (b2) its intrinsic viscosity [η] is 0.1 to 10 dl/g, and
- (b3) its molecular weight distribution is not more than
- wherein a total of the components (A) and (B) is 100% by weight, and a total of all units contained in the amorphous α -olefin polymer is 100% by mol.
